

NOURSE

SUMMARY PLANTING GUIDE – SANDRA BERRY

SPACING

- 8"-12" between rows
- Minimum of 3' between each plant
- Sunny, well drained location is best

IRRIGATION

- Irrigate as needed
- Drip irrigation works well

FERTILIZATION

- In spring, a light application of compost and bone meal
- pH: 6.5 – 7.0

WEED CONTROL

- It's important to keep plants weed free, especially young plants
- A light mulch will aid in production, but is not required

SPECIAL CONSIDERATIONS

- Two or more plants are recommended for best production
- Protect younger plants (1-3yrs) from the sun
- Older plants prefer sun, but grow fine in shade
- Plants require a pole, trellis or wall to climb
- Important to provide frost protection during blossom
