

How to Test Soil pH with Probe Meter

1. Clean pH meter with provided green scrub pad.
2. Take multiple samples from different locations in the planting at 4-6" depth. **(Wear gloves as oils on hands can alter results)**
3. Mix samples together into composite sample of planting area.
4. Wet composite sample to a muddy paste consistency. Sample should be moist enough to hold together when squeezed in hand without water dripping.
5. Place sample into tall cylinder 4-6" depth.
6. Turn on meter and push into sample.
7. Rinse and clean pH meter with provided green scrub pad.
